

ITT Mini Bot II

The Mini Bot II is a robotic vacuum with an auto-empty and charge docking station. This unit vacuums for up to 260 minutes on a single charge. It automatically returns to its charging dock when the battery gets low. Once charged, it gets back to cleaning right where it left off.

MAPPING

Quick Mapping creates a map of your site in minutes, so you can immediately begin customising your cleans – label rooms, clean specific areas, set up boundaries, and more. With new 3D maps, simply tap a piece of furniture on the map to clean around it!

LIGHTWEIGHT AND EFFICIENT EMPTY STATION

The Mini Bot II automatically self-empties its dustbin after cleaning. It also comes with a hypoallergenic dust bag that auto-seals, ensuring no dust particles escape into the air.

ICE Mini Bot II	
Navigation Type	TrueMapping
